This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins and a partial carried wurine CARD-41 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase ceruitment domain (CARD) polynucleotides, polypeptides, homologues and antibodies can be used in screening assays, detection assays, predictive medicine and therapeutic and prophylactic methods of treatment. The medicine and therapeutic and prophylactic methods of treatment. The catrivity of the TMF receptor complex, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of the TMF receptor complex, or abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Inspendent tumours), autoimmune disorders (particularly follicular complement tumours), autoimmune disorders (e.g. systemic lupus cerythematosis, immune-mediated glomerulonephritis), viral infections, retinitis pigmentosa, spinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndroms, myocardial infarction, and stroke. CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation of cellular proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 gene can express a compounds which modulate their activity. The CARD-4 gene can express a long transcript that encodes CARD-4S or two CARD-4 splice variants, CARD-4Y and CARD-2. This sequence represents the human CARD-3 protein described in the method of the invention invention

Bertin J;

WPI; 2001-061973/07. N-PSDB; AAF30001 Isolated intracellular proteins predicted to be involved in regulating caspase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and hematological disorders.

Claim 9; Fig 2; 208pp; English.

The present sequence is that of human caspase recruitment domain 3 (CARD-3), an intracellular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated cDNA clone (see AAP30001). Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. using expression or activity of GARD-3, CARD-4, CARD-5 or CARD-6 e.g. using autoimmune disorders, neurological disorders. CARD-3, -4, -5 and -6 proteins can be used to regulate cell proliferation, cell survival and cell growth. They can also be used to screen drugs or compounds that modulate their activity or expression and to treat disorders associated with insufficient or excessive production of CARD-3, -4, -5 or -6 protein, or production of an aberrant protein

```

The invention relates to identifying (MI) a compound which modulates a human or murine caspase recruitment domain (CARD)-4L (long form) polypeptide with a by contacting the polypeptide with a test compound and determining the effect of the test compound on the activity of the polypeptide to identify a compound which modulates the polypeptide. The method may be adapted for identifying a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of

```
cell expressing a candidate compound for modulating LPS (lipopolysaccharide)-
mediated activation of nuclear factor-kappa B (NF-kB), by providing a
cell expressing a polypeptide comprising the LRR domain of CARD-4 and
charbouring LPS, exposing the cell to a test compound and measuring NF-kB
activation, where altered NF-kB activation polypeptide in the presence of
the test compound compared to the binding in the absence of the test
compound indicates that the test compound is a candidate compound for
compound indicates that the test compound is a candidate compound for
modulating LPS-mediated activation of NF-kB. Modulators identified by
cm (M1) are useful for treating a disorder characterised by abserrant CARD-4
cprotein or nucleic acid. Compounds that modulate the activity of CARD-41

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-11 and CARD-45. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and hormone-dependent tumours such as brass cancer, prostate cancer, and ovarian cancer, autoimmune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections cured by herspes viruses, poxituses, and adenoviruses), neurological diseases (such as Alzheimer's disease, Patrinison's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anemia and the myelodysplastic syndromes. This sequence represents a human CARD protein relating to the invention
                                                                                                                                             Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            amyotrophic lateral sclerosis, retinitis pigmentosa; spinal muscular atrophy; cerebellar degeneration; haematological disease; anaemia; neutropaenia; myelodysplastic syndrome; myocardial infarction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         313 KLÓSVSSAIHLCDKKKMELSLNIPVNHGPQEESCGSSQLHENSGSPETSRSLPAPQDNDF 372

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-17, human CARD-12 or murine CARD-14 (all splice variants of CARD-14) chunan CARD-14 (all splice variants of CARD-14) collypeptide. Also included is an isolated fusion protein, comprising the collypeptide covalently linked by a peptide bond to a heterologous collypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, conjugating clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death e.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immune related glomerulonephitatis), viral infections, AlDS (acquired immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, retinitis dismentosa, spinal muscular atrophy and cereballar degeneration), heamatological diseases (e.g. anaemia, neutropaenia and myelodysplastic syndromes), myocardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD crops and carbot and chard and chard and chard and chard and human CARD-4 is located on chromosome 7. The present sequence is a human carbot.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       432
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 372

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIPZ, RICK and CARDIAK) is known to be a mediator. of p75 (a member of the tumour necrosis factor (TNF) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulonephritis, viral infections such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present compound alters the binding of CARD-3 to p75, which comprises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a colypeptide compound, and determining if binding is altered. This polypeptide is the human CARD-3 protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detecting compounds which alter binding of the caspase recruitment doma: (CARD) of CARD-3 polypeptide to the neurotrophin receptor p75 is useful to provide compounds for treating CARD-3 mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Fig 1; 40pp; English

Patent No. 6348573

APPLICANT: INFORMATION:
APPLICANT: Indhara, Nachiro
APPLICANT: Inchara, Nachiro
APPLICANT: Koseki, Takeyoshi
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
FILE REFERENCE: UM-03333

CURRENT APPLICATION NUMBER: US/09/069,023A

CURRENT FILING DATE: 1998-04-27

NUMBER OF SEQ ID NOS: 38

SOFTWARE: PatentIn Ver. 2.0

Patent No. 6469140

GENERAL INNORMATION:
GENERAL INCORMATION:
TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED
TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED
TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF
FILE REFERENCE: 07334-112001
CURRENT APPLICATION NUMBER: US/09/207,359B
CURRENT FILING DATE: 1998-12-08
PRIOR APPLICATION NUMBER: US 09/099,041
PRIOR APPLICATION NUMBER: US 09/099,041
PRIOR PILLING DATE: 1998-06-17
PRIOR PILLING DATE: 1998-02-06
NUMBER OF SEQ ID NOS: 47

SOFTWARE: FASELSEQ for Windows Version 4.0
                                                                      COMPUTER: 14M COMPACTALLS
OPERATING SYSTEM: Windows 95
SOFTWARE: FastSEQ for Windows 95
SOFTWARE: FastSEQ for Windows 02.0b

i Sequence 6, Application US/09069023A

patent No. 6348573

GENERAL INFORMATION:
APPLICANT: Nuneza, Gabriel
APPLICANT: Koseki, Takeyoshi
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
FILE REFERRINCE: UM-03333

CURRENT APPLICATION NUMBER: US/09/069,023A

CURRENT FILING DATE: 1998-04-27

NUMBER OF SEQ ID NOS: 38

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 6

LENGTH: 167

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       R;Weinert, T.A.; Harlow, D.

I. FUNCTION: Activates pro-caspase-1 and pro-caspase-8. Potentiates CASP-8-mediated apoptosis. Activates NF-kappaB.

- I- CYMALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

Binds to BIRC3/C-IAPI and BIRC2/C-IAP2, TRAFI, TRAFS and TRAFS and TRAFS and TRAFS and TRAFS. May be a component of both the TNFRSFIA and INRFSFS/CD40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     K->A: ABOLISHES KINASE ACTIVITY.
K->M: REDUCES FAS-MEDIATED APOPTOSIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: Cytoplasmic (Probable).
TISSUE SPECIFICITY: Detected in heart, brain, placenta, lung, peripheral blood leukocytes, spleen, kidney, testis, prostate, pancreas and lymph node.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PTM: Autophosphorylated.
SIMILARITY: Belongs to the Ser/Thr family of protein kinases.
SIMILARITY: Contains 1 CARD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GO; GO:0004674; F:protein serine/threonine kinase activity; TAS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-FEB-2003 (Rel. 41, Last sequence update)
10-OCT-2003 (Rel. 42, Last annotation update)
Receptor-interacting serine/threonine protein kinase 2 (EC 2.7.1.37).
RIPK2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CASP-8-mediated apoptosis. Activates NP-kappaB By similarity).

CASP-8-mediated apoptosis. Activates NP-kappaB By similarity).

-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

-!- SUBBUIT: BINGS to CFFAR/CLARP and CASP1 via their CARD domains.

-!- SUBBUIT: BINGS to CFFAR/CLARP and CASP1 via their CARD domains.

Binds to BIRC3/c-IAP1 and BIRC3/c-IAP2, TRAF1, TRAF2, TRAF5 and TRAF6. May be a component of both the TNFRSF1A and TNRFSF5/CD40 receptor complex (By similarity).

-!- SUBCELLULAR LOCATION: Cytoplasmic (Probable).

-!- STMLARITY: Belongs to the Ser/Thr family of protein kinases.

-!- SIMILARITY: Contains 1 CARD domain.
                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

"Human Nodi confers responsiveness to bacterial lipopolysaccharides.";
J. Biol. Chem. 276:2551-2554 (2001).
-!- FUNCTION: Enhances caspase-9-mediated apoptosis. Induces NF-kappa-
B activity via RICK (CARDIAK, RIP2) and IKK-gamma. Confers
responsiveness to intracellular bacterial lipopolysaccharides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- SUBUNIT: Self-associates. Binds to caspase-9 and RICK by CARD-CARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         interaction.
--- SUBCELLULAR LOCATION: Cytoplasmic.
--- TISSUE SPECIFICITY: Highly expressed in adult heart, skeletal muscle, pancreas, spleen and ovary. Also detected in placenta, lung, liver, kidney, thymus, testis, small intestine and colon.
--- SIMILARITY: Contains 1 CARD domain.
--- SIMILARITY: Contains 9 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GO; GO: 0008656; F: caspase activator activity; TAS. RCONCTION: Enhances caspase-9-mediated apoptosis. Induces NF-kappa-

B activity via RKCK (CARDIAK, RIP2) and IKK-gamma. Confers

C.-FUNCTION: Enhances to intracellular bacterial lipopolysaccharides

C. LPS) (By similarity).

C. -- SUBUMIT: Salf-associates. Binds to caspase-9 and RICK by CARD-CARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. -!- FUNCTION: TFIF IS A GENERAL TRANSCRIPTION INITIATION FACTOR THAT BINDS TO RNA POLYMERASE II AND HELPS TO RECRUIT IT TO THE INITIATION COMPLEX IN COLLABORATION WITH TFIIB. IT PROMOTES TRANSCRIPTION ELONGATION.

Genomics 46:495-503(1997).

-1.-FUNCTION: APOPTOTIC SUPPRESSOR. THE BIR MOTIFS REGION INTERACTS
WITH TWE RECEPTOR ASSOCIATED FACTORS 1 AND 2 (TRAF1 AND TRAF2) TO
FORM AN HETEROMERIC COMPLEX, WHICH IS THEN RECRUITED TO THE TUMOR
NECROSIS FACTOR RECEPTOR 2 (TWRE2).

-1. SUBGNUIT: Interacts with SMAC and with PRSS25; these interactions
inhibit apoptotic suppressor activity (By similarity).

-1. SUBCELLULAR LOCATION: Cytoplasmic (Potential).

-1. SUBCELLULAR LOCATION: Cytoplasmic (Potential).

-1. SISUE SPECIFICITY: Expressed in heart, brain, spleen, lung,
liver, skeletal muscle, kidney and testis.

-1. SIMILARITY: Contains 3 BIR repeats.

-1. SIMILARITY: Contains 1 CARD domain.

-1. SIMILARITY: Contains 1 RING-type zinc finger.
                                                                                                                                             SEQUENCE FROM N.A., AND PARTIAL SEQUENCE.

                Walker C.W., Boom J.D., Marsh A.G.;
"First non-vertebrate member of the myc gene family is seasonally expessed in an invertebrate testis.";
Oncogene 7:2007-2012 (1992).
-!- FUNCTION: Participates in the regulation of gene transcription.
Binds DNA both in a non-specific manner and also specifically to recognizes the core sequence CAC[GA]TG. Seems to activate the transcription of growth-related genes (By similarity).
-!- SUBUNIT: Efficient DNA binding requires dimerization with another bHLH protein (By similarity).
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SUBCELLULAR LOCATION: Nuclear.

XV.
The complete sequences of 100 new cDNA clones from brain which code
for large procedus in vitro.";
DNA Res. 6:337-345(1999).
-!- FUNCTION: Poor transcriptional factor which uses the canonical
single or multiple CARG boxes DNA sequence. Acts as a cofactor of
serum response factor (SRP) with the potential to modulate SRF
target genes (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

"Isolation and characterization of a novel actin filament-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  protein from Saccharomyces cerevisiae.";
Oncogene 16:121-130(1998).
-!- FUNCTION: Potential methyltransferase (By similarity). Binds Fractin and shows weak F-actin crosslinking activity.
-!- SUBCELLULAR LOCATION: Cytoplasmic and cortical cytoskeleton.
-!- MISCELLANEOUS: A ribosomal frameshift occurs between the codons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=97127829; PubMed=8972580;
